VisionLink

MATERIAL MONITORING AND TRACKING

ACHIEVE BETTER RESULTS, IMPROVE THE BOTTOM LINE

VisionLink® offers a unified view of health, location and productivity for the entire fleet, regardless of manufacturer. VisionLink Unified Suite applications are mobile-ready, with faster and better performance. Easily navigate through the intuitive interface and leverage telematics device information to improve your return on investment. VisionLink provides actionable information for key decision-making to help you improve your bottom line.

VisionLink Unified Suite applications include Unified Fleet, Unified Service, Unified Productivity and Administrator. VisionLink Unified Fleet's user-friendly screens display asset information to help better manage a mixed fleet, no matter the machine brand. To stay operational and extend asset life, manage maintenance schedules and track machine health with VisionLink Unified Service. VisionLink Unified Productivity optimizes project productivity by monitoring the movement of materials against project or asset targets. VisionLink Administrator unifies all of the applications by enabling users to define what is important, manage access and configure settings to optimize workflow.

VisionLink Unified Productivity

VisionLink Unified Productivity helps project managers, foremen and operators maximize site efficiency in near real-time to keep projects on time and on budget. This application enables monitoring of payload, volumes, as well as other material movement metrics including load counts and cycle times.

- ▶ Cycle counts based on load and dump
- ▶ Monitor cycle times and load counts to track actuals against planned, and monitor job site productivity
- ▶ Task-focused applications to simplify the user experience
- ▶ Productivity metrics based on working, idle and run times
- ▶ Configurable dashboards, summaries, alerts and reports
- ▶ Improved mobile experience on tablets and smartphones
- ▶ Supports mixed fleets
- ▶ View individual machine performance or aggregate fleet data to see an entire site at a glance

Key Benefits

On Time and On Budget

Unified Productivity tracks the amount of material moved from one location to another, optimizing project productivity by monitoring the movement of materials vs. project targets. Users have the information needed in near real-time to achieve project targets on time, and to maintain production schedules by monitoring productivity against plan. Unified Productivity can track the material volumes being transported across boundaries, sites, geofences and projects. Use Unified Productivity to assist with maximizing project efficiency, tracking timeline and monitoring costs to complete projects on time and on budget.

Maximize Productivity

Use VisionLink Unified Productivity to replace your clipboard and counter/clicker.

Unified Productivity helps users:

- ▶ Automatically monitor project productivity
- ▶ Easily count loads and dumps based on information from the machine's telematics devices or the VisionLink CycleCounter application now available for Apple and Android devices
- ▶ Track and report payloads on payload-equipped loading and hauling units
- ▶ Record estimated volumes moved or placed based on load and cycle counts or payload totals
- ▶ Track materials movement to remove contaminated materials from the site, and use structural and non-structural materials in the correct site location
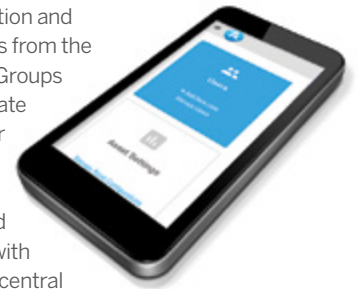

Mobile-Ready

More and more contractors access their fleet information on mobile devices. VisionLink Unified Productivity is responsively designed; the functionality is the same no matter what device is used to access the app, only the layout changes. Go ahead, get mobile and improve productivity.

Trimble

VisionLink
MATERIAL MONITORING AND TRACKING

VisionLink Administrator

Designed to provide administrative functions across the VisionLink Unified Suite of applications, VisionLink Administrator allows user-assigned administrators to set up and manage users, geofences, asset settings, reports, notifications, workflows and more from a centralized location. Integrate mixed fleet assets utilizing AEMP 1.2/2.0 and other APIs, and add, edit and delete service providers.

With VisionLink Administrator, consolidate the creation and management of notifications and scheduled reports from the different VisionLink Unified Suite applications. The Groups Management feature enables administrators to create and manage a set of assets for dealer and customer accounts using specialized tools for setting asset details, configuring devices, and setting target values. Create, modify and manage projects created across the VisionLink Unified Suite of applications with the Projects Management feature. Streamline your central workflow with Visionlink Administrator.
